Technical Product Manager

Description

- Demonstrated ability to work effectively with engineering teams, translating complex technical concepts into actionable plans
- Solid understanding of backend systems, including microservices, databases, messaging systems, and modern platform architectures
- Strong communication and stakeholder management skills, with the ability to influence at all levels, including senior leadership
- Experience managing technical backlogs and working closely with cross-functional teams
- Familiarity with Agile methodologies, particularly Scrum and Kanban
- Proven track record of successfully delivering technical products in fast-paced environments

Responsibilities

- Collaborate closely with business and engineering stakeholders to identify pain points and opportunities for infrastructure and tooling improvements
- Facilitate internal discovery and proof-of-concepts to validate new ideas and solutions
- Lead the end-to-end product development process, from gathering technical requirements to driving execution within Agile teams
- Manage and prioritize backlogs to ensure alignment with business and engineering objectives
- Continuously improve team methodologies to accelerate processes and enhance collaboration
- Translate business needs and technical challenges into detailed user stories, acceptance criteria, and product artifacts
- Drive cross-team coordination and ensure the timely delivery of features with high-quality standards
- Conduct market and technical research to guide product decisions and strategy
- Serve as the product expert, understanding the technical architecture, business logic, and integration points for your areas of responsibility
-

Qualifications

- 5+ years of product management experience in a technical environment
- Strong background in computer science, engineering, business, or related fields

Job Benefits

Base Salary Range: $90,000—$150,000 CAD
